Top Skills

React 19
TypeScript
Next.js

Certifications

JavaScript Algorithms and Data Structures
Front End Development Libraries

Valery Kot

Frontend Developer | React 19, TypeScript, Web3, AI Integration |
Ex-Production Director with 20+ years exp in Management
Minsk, Belarus

Summary

In 2022, I pivoted to software engineering. I joined Santiment as a Junior Developer and rapidly grew into a Lead role, taking ownership of critical products like SanR and the Sanitize ecosystem.

I spent 20+ years managing factories, optimizing production lines, and leading teams of 150+ people. I used to solve problems with heavy machinery and logistics. Now, I solve them with React, TypeScript, and AI agents. And honestly? The logic is surprisingly similar—it's all about architecture, efficiency, and avoiding bottlenecks.

My current focus:

- Frontend Architecture: React 19, Next.js 15, TanStack Query, Jotai.
- Web3 & DeFi: Wagmi, Viem, interacting with Ethereum/Arbitrum smart contracts.
- AI & Automation: Building autonomous agents with Trigger.dev, OpenAI GPT-4o, and vector databases.

I bring the discipline of a production director to the chaotic world of modern web development. I don't just "write code"—I build reliable systems.

Experience

Santiment AG

Middle+/Senior Frontend Developer

December 2022 - Present (3 years 3 months)

Joined as a Junior Developer and quickly grew into a Senior Specialist role, taking ownership of the ecosystem's core products. I specialize in migrating legacy codebases to cutting-edge stacks (React 19, Vite) and engineering complex Web3 interfaces.

- Managing hundreds of people in manufacturing was stressful, but debugging race conditions in a Web3 wallet is a whole different level of adrenaline. I handle both with the same systemic discipline.

- KEY PROJECTS:

SanR (Web3 Prediction Market)

- Participated in the development of a high-performance front end using React 19, Vite, and TypeScript.
- Engineered atomic state management using Jotai and async data handling with TanStack Query, significantly reducing re-renders.
- Integrated complex blockchain interactions via Wagmi & Viem (wallet connection, signing, smart contract calls).
- Built professional financial charting tools using Recharts and Lightweight Charts.

Strategy Marketplace (SanQuants)

- Participated in the development of a platform for quantitative strategies utilizing TanStack Router for type-safe routing.
- Implemented advanced data visualization with D3.js and Chart.js.

Sanitize – Crypto Influencer Analytics Platform

- Led the development of a real-time analytics platform that monitors and evaluates cryptocurrency influencers across social media, with a focus on Twitter/X.
- Built a Chrome Extension using Plasmo and React to seamlessly integrate influencer insights directly into users' social feeds via content scripts and DOM manipulation.

- INFRASTRUCTURE & QUALITY:

- UI/UX Optimization: Led the migration of styles to Tailwind CSS 4, improving maintainability and build speeds.
- Documentation: Deployed and maintained technical documentation using Docusaurus 3.4.0, served via Nginx.

- Code Quality: Enforced strict standards with TypeScript 5.8, ESLint, and Prettier to ensure a scalable codebase.

Stack: React 19, TypeScript, Next.js, Wagmi/Viem, Jotai, TanStack Query, Tailwind.

Mind development

Full Stack Engineer

September 2022 - Present (3 years 6 months)

Successfully implemented projects in the areas of retail and e-commerce in multicultural teams ranging from 4 to 20 people. I am responsible for implementing new functionality, analyzing and resolving incidents, integrating external services, end-to-end testing, developing adaptive communication templates, and supporting and refactoring legacy code.

Recently, I have been delving into the design and creation of autonomous agents and intelligent automation tools, applying modern server approaches and artificial intelligence-based solutions. Key areas of current activity:

- Development of orchestration systems for automating strategies in decentralized financial environments: integration of analytical AI models, implementation of secure interaction with blockchain (transactions, voting, management).
- Creation of intelligent communication agents: designing bots with context-oriented responses, implementing knowledge extraction and generation mechanisms, automating background data processing and communication processes.
- Building web solutions for business process management: developing reliable backend architectures and intuitive interfaces for e-commerce and operational management systems.

Core Technical Expertise:

Frontend Technologies:

- React 19, Next.js 15, TypeScript 5.x, Vite 7, Webpack 5
- State Management: Jotai, TanStack Query (React Query), Context API
- Styling: Tailwind CSS 4, Styled Components, PostCSS
- Data Visualization: D3.js, Chart.js, Recharts, Lightweight Charts

Blockchain & Web3:

- Wagmi 2.x, Viem 2.x, Ethers.js, Web3Modal

- Smart Contract Integration, Wallet Connectivity
- DeFi Protocols: Curve Finance, Arbitrum Network
- On-chain Data Analysis, Transaction Management

Backend & Infrastructure:

- Node.js, Express, Prisma ORM
- PostgreSQL, SQLite, Firebase
- Docker, Nginx, Jenkins CI/CD
- AWS ECR, Firebase Hosting

AI & Automation:

- OpenAI SDK, GPT Integration, Trigger.dev

Various Manufacturing Companies (Fotoprint, Univak, Uniflex)

Operations Director / Production Manager

March 2001 - June 2022 (21 years 4 months)

Минск

Prior to my career in tech, I spent two decades in senior management roles within the printing and manufacturing industry.

Key Highlights:

- Scaled Operations: Managed production facilities with 150+ employees.
- Efficiency: Increased finished product output by 55% while optimizing staff count by 15% (Lean Management).
- Tech Implementation: Led the installation and commissioning of industrial digital equipment (HP Indigo, Comexi), integrating hardware with software control systems.
- Crisis Management: Full cycle responsibility—from facility repair to supply chain logistics and government compliance.

Successfully pivoted to Software Engineering in 2022, transferring these management and systemic thinking skills to code architecture.

What this contributed to my career in development:

- Project management: Launching production from scratch (analogy: launching a new product or service).
- Technology implementation: Delivery and integration of complex equipment (analogy: implementation of new frameworks, libraries, approaches).

- Process optimization: Increasing efficiency by 55% through analysis and KPIs (analogy: refactoring, optimizing application performance).
- Teamwork: Training, mentoring, building work processes.

Education

freeCodeCamp

Front End Developer Certification, Информационные технологии · (May 2022 - September 2022)

Белорусский государственный технологический университет
Диплом специалиста по инженерной
специальности, полиграфия · (1994 - 1999)

Белорусский государственный технологический университет
